SKILLS

- AI models and agents**
OpenAI · Claude · Gemini · Mistral · LangChain · LangGraph · Whisper
- AI-assisted development**
Claude Code · Antigravity · VS Code · GitHub · Git
- Automation and integration**
n8n · APIs REST · Webhooks · WhatsApp · Docker

- Data and BI**
SQL · Python · Pandas · scikit-learn · Power BI · DAX · Power Query · Microsoft Fabric · Looker

- Data engineering and cloud**
BigQuery · dbt · Google Cloud · PostgreSQL · SQL Server · ETL

EDUCATION AND PUBLICATION

- MBA in Data Science and Analytics**
University of São Paulo (USP/ESALQ) · 2024 — 2025
- Paper published at SBPO 2025**
57th Brazilian Symposium on Operations Research · 2025
- B.Eng. in Mechanical Engineering**
Federal University of Ceará · 2016 — 2021

Thomas Barbosa

DATA, AI & AUTOMATION SPECIALIST

SUMMARY

I lead the Data & AI team at Grupo Raposo Plásticos: 130+ automations and 10 AI agents in production, from the ERP to the decision dashboard. Before that, pricing and market intelligence at Solar Coca-Cola and BI at Arco Educação.

EXPERIENCE

- Data Specialist · Data & AI team lead · Grupo Raposo Plásticos** 2025 — present
I lead the Data & AI team that brings solutions to the group's plants: an AI agents hub and the group's automation web — ERP and MES reads, agents that answer and act on WhatsApp, image and PDF reports and more than a hundred n8n workflows.
- Senior Pricing Analyst · Solar Coca-Cola** 2024 — 2025
Market Intelligence Analyst (Mar 2024 — Apr 2025)
Market intelligence and Revenue Growth Management: SQL over Scanntech and Nielsen retail data, ETL from many sources to anticipate revenue risks and opportunities, and Power BI dashboards that guided portfolio pricing.
- Projects and BI Analyst · SAS Education Platform · Arco Educação** 2020 — 2024
Projects Analyst I (Apr 2021 — Dec 2023) · Assessment Management Intern (Mar 2020 — Apr 2021)
Production data for teaching materials in SQL Server (procedures and SSIS) and BigQuery; productivity, cost and quality dashboards in Power BI and Looker for coordinators and managers; and Python and SQL automations that removed manual routines from the management team.
- CEO · EXPeduca** 2017 — 2021
COO (Aug 2017 — Mar 2019)
Ran operations and later the company, part-time, while in university.

SELECTED PROJECTS

- AI agents hub** · Python, LLMs, SQL, PostgreSQL, Docker
Six areas (HR, treasury, accounting, banking, management and manufacturing) depended on spreadsheets and manual ERP lookups. I built a platform with 10 agents that read the ERP, the MES and spreadsheets and answer with the data's date and source; AI routes, code executes.
Outcome: Errors no manual routine caught now surface on their own: the accounting agent checks tens of thousands of records live, in seconds, and the hour-bank agent shows what the consolidated balance was hiding.
- BI dashboards and data pipeline** · Power BI, Looker, dbt, DAX, BigQuery
More than 50 BI dashboards in Power BI and Looker Studio throughout my career. The industrial ones cover overview, production, OEE, downtime, inventory, logistics, costs, batch control, traceability, accounting and tasks, on a pipeline with extraction, a raw layer, dbt, tests and a dimensional model.
- 135 n8n automations** · n8n, BigQuery, Graph API, Gotenberg
Reports nobody opened and checks that depended on one person. 2,880 nodes connecting ERP, BigQuery, Microsoft 365 and Google deliver images, PDFs and tasks with deadlines where people already are — WhatsApp and e-mail — every business day, with nobody pressing a button.
Outcome: Every late production order becomes a task with an owner and a deadline, so the backlog is followed up every day instead of discovered at month-end. Invoice-receipt reconciliation runs on its own across three plants, without opening a single PDF.

HOW I WORK

I start with the pain, not the tool · Driven by challenge · Data you can trust · AI supports, people decide.
